

# PRECISION ROUTED

Individual three dimensional letters, numbers and symbols are ideally suited for both interior and exterior applications. Cut with computer accuracy, they provide durable graphic images when applied to building facades, walls or when combined with any Charleston Manufacturing, LLC architectural signage system.

All dimensional images are cut from aluminum sheet up to 1/2" and are finished with our standard acrylic polyurethane finish. They are available either with or without welded mounting studs, depending on the installation method required. In addition to our standard aluminum letters, we are also capable of producing precision cut letters and symbols from a variety of other materials including bronze, muntz metal, brass, stainless steel, acrylic, wood, high density foamboard (SignFoam®), simulated stone products (Corian®, Avonite®, etc.), aluminum composite sheet and decorative metal laminates.
