

READERBOARDS

Charleston Sign Manufacturing offers exterior directories and readerboards that are perfect for signage applications requiring information on a wide variety of subject matters.

These directories and readerboards can be used in either illuminated or non-illuminated configurations, and they are custom-made to suit your specific application.

You can choose from either single or double-face configurations, and a variety of message media options are available, from corkboard to changeable sign letters.

All units are built to withstand tough outdoor environments and can be either anodized or finished with our standard acrylic polyurethane finish.

To ensure durability, all Charleston Sign Manufacturing exterior directories feature the same durable extrusions used in all of our products. Additionally, they come with weather-resistant aluminum backing, silicone sealant, and requisite ventilation.

A readerboard is a visual display board that can convey information about products or services, travel, news, or event information.

While traditional readerboards often use simple block letters that must be physically manipulated to change the message, many modern versions use LEDs that can be instantaneously updated to reflect changes to the displayed information.

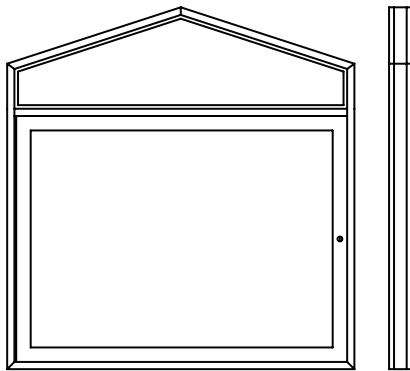

BENEFITS
